

TAHA RIZVI

UNREAL DEVELOPER

Senior Unreal Engine Developer with 10 years of experience building high-performance real-time applications using C++ and Blueprints. Proven ability to lead technical initiatives, collaborate effectively across disciplines, and solve complex engineering challenges in fast-paced development environments.

PORTFOLIO

<https://taha110.github.io/>
<https://www.linkedin.com/in/taha-rizvi/>

ADDRESS

Düsseldorf, Germany

SKILLS

Unreal Engine	C++
Blueprints	Gameplay Systems
Profiling	Optimization
Unreal Editor Tools	Plugins
Perforce / Git	CI/CD
SonarQube	Code Quality
Multiplayer Systems	VR Development
Sequencer	UMG UI Systems
Data-Driven (JSON)	Animation Systems
System Design	Scalable Architecture
Unity Engine	IK Systems

EDUCATION

MASTERS IN COMPUTER SCIENCE

IBA Karachi

01/2017– 12/2020

Courses: Mathematics in Games | Software Project Management | Human-Computer Interaction | Advanced Algorithms

BACHELORS IN COMPUTER SCIENCE

IBA Karachi

01/2012– 01/2016

AWARDS

GOLD MEDALIST | 2016 IBA Karachi

WINNER - PROGRAMMING

COMPETITION | 2014 FAST Karachi

WORK EXPERIENCE

SENIOR UNREAL ENGINE PROGRAMMER | Sportradar AG

Jul 2023 – Present

- Developed scalable and modular **Unreal Engine editor tools** in C++ to improve team-wide workflow efficiency and development velocity.
- Designed and implemented reusable **editor utility systems** that streamlined content pipelines and reduced repetitive manual tasks.
- Improved **code quality** and reduced **technical debt** by integrating and maintaining static analysis workflows using **SonarQube**.
- Implemented real-time **broadcast presentation systems**, including halftime/fulltime transitions, goal overlays, replay systems, overtime handling, and penalty shootout features.
- Developed automated **sequence-generation pipelines** using **JSON-driven** console command workflows, increasing production flexibility and reducing manual setup time.
- Collaborated closely with designers, artists, and production teams to deliver **live sports broadcast features** under tight deadlines.
- Mentored **junior developers** and technical artists through code reviews, debugging support, and Unreal Engine best practices.
- Contributed to **architecture decisions**, feature planning, and long-term maintainability of Unreal Engine systems.

UNREAL ENGINE PROGRAMMER | realworld one GmbH

Apr 2021 – Jun 2023

- Developed **multiplayer VR applications** and immersive metaverse-based experiences using **Unreal Engine**.
- Architected **modular gameplay systems** and reusable framework components adopted across multiple VR projects.
- Built interactive **pharmaceutical training simulations** featuring guided workflows, sandbox interactions, and realistic VR user experiences.
- Collaborated with **cross-functional teams** including designers, technical artists, QA, and product stakeholders throughout the full production lifecycle.
- Optimized gameplay systems and **VR interactions** for performance, usability, and scalability across enterprise applications.
- Mentored junior developers and supported internal knowledge sharing for **Unreal Engine** and VR development practices.
- Participated in **feature planning**, technical design discussions, and deployment processes for client-facing applications.

PROJECTS

VIRTUAL FOOTBALL

| Sportradar AG

UE5 | C++ | Blueprints | Editor Tools | JSON | Sequencer | MetaHuman

- Developed a large-scale **virtual football broadcast system** containing over **100,000+ video assets**.
- Built scalable **UE5** systems supporting customizable league, cup, and team configurations.
- Created **JSON-driven automation pipelines** to dynamically generate broadcast-ready video content.
- Managed workflows for **1,250+ cinematic sequences** using Sequencer and automated shot generation.
- Improved **editor tooling** and automated content generation workflows for live sports production.

VR INDUSTRIAL TRAINING

| realworld one GmbH

Unreal Engine | C++ | Blueprints | VR | Multiplayer | UMG

- Developed immersive **multiplayer VR training applications** for industrial and pharmaceutical workflows.
- Built interactive **linear and sandbox-style VR simulations** within Unreal Engine.
- Implemented core **VR interaction systems**, object manipulation, and multiplayer synchronization.
- Developed a **mirroring mode** to enhance collaborative learning and simulation accuracy.

AREA OF DARKNESS VR

| Rematch Studios

Unreal Engine | C++ | Blueprints | Rift | Vive | Steam | IK | QTEs

- Developed gameplay systems for a narrative-driven **VR FPS adventure game**.
- Implemented advanced **full-body IK systems** for immersive VR interactions.
- Developed gameplay mechanics including **physics-based puzzles**, combat, and inventory systems.
- Implemented **QTEs**, NPC dialogue systems, and branching narrative choices.

PERSONAL & FREELANCE PROJECTS

Unreal Engine | Unity | C++ | C# | VR | AR | Multiplayer | PC | Mobile

- Developed multiple **personal and freelance projects** across PC, mobile, VR, and AR platforms.
- Developed scalable systems using both **Unreal Engine** and **Unity**.
- Portfolio: [taha110.github.io](https://github.com/taha110)

GAMEPLAY PROGRAMMER | Bitbuu Games

Dec 2019 – Dec 2020

- Developed gameplay systems for a **multiplayer mobile title** based on the **Hello Kitty IP**.
- Implemented modular **gameplay mechanics** and progression systems to improve player engagement and maintainability.
- Integrated **GameSparks backend services**, including multiplayer functionality, player data handling, and online systems.
- Developed frontend **UI systems**, social login integration, push notifications, and **in-app purchase** functionality.
- Contributed to **clean code architecture** and maintainable gameplay frameworks within an agile development environment.
- Collaborated with artists, designers, and backend developers to deliver **live-service mobile game features**.

VR/AR GAMEPLAY PROGRAMMER | Rematch Studios

Feb 2016 – Nov 2019

- Developed a full-body **VR character system** featuring advanced **inverse kinematics (IK)** for hands, feet, and spine interactions to improve player immersion and animation fidelity.
- Designed and implemented a wide range of **gameplay systems**, including puzzle mechanics, physics-based interactions, quick-time events, and NPC dialogue systems.
- Built and maintained **multiplayer systems** with **AWS-based online matchmaking** for seamless player connectivity and session management.
- Developed robust **save/load systems** to support persistent gameplay progression and reliable state restoration.
- Managed **Perforce source control workflows** and provided pipeline support and training for technical artists and content creation teams.
- Collaborated closely with designers, artists, and engineers to deliver immersive **VR/AR gameplay experiences** from prototype through production.
- Contributed to **gameplay architecture**, debugging, optimization, and overall system maintainability within Unreal Engine projects.
